# PrintFIX PRO™ 2.0

Gallery Quality Prints in Color, Neutral Black and White, and Tinted Black & White

**When you put your work on display - in color or black and white - the print quality has to be flawless.**

Get more creative control when you create your own custom profiles with PrintFIX PRO™ 2.0. Produce professional prints quickly, without expensive trial-and-error testing. Included are a set of color and black and white targets, along with tools that let you push the limits of the advanced inkjets. Plus, this wizard-driven program is simple to use - and it comes at a reasonable price.

Winner of the TIPA award for  
"Best Color Management System, 2006"

PrintFIX PRO Suite™ has won the most prestigious photography award (the TIPA Award) in the "Best Color Management" category. The 31 leading photo magazines in Europe that vote on the awards seem to agree with many other reviewers that Datacolor has introduced a superior new product at a new price point.

The PrintFIX PRO Suite™ convinced the TIPA jury that it is the best complete solution for consistent digital color control throughout the digital workflow – from monitor calibration for your display to creating custom printer profiles for final print output.

## PrintFIX PRO<sup>™</sup> 2.0

### Gallery Quality Prints in Color, Neutral Black and White, and Tinted Black & White

You want professional prints - better than the prints from canned profiles, and for papers the canned profiles don't cover - and you want them quickly, without expensive trial-and-error testing. Create your own custom profiles with PrintFIX PRO™ - Select any combination of printer, paper and ink. Measure a single test print with the included Spectrocolorimeter, then let PrintFIX PRO™ create a unique profile in just a few minutes! All at a price that is hundreds less than anything else available on the market today.

#### Fast and Accurate

Create custom profiles in minutes with standard color or black and white targets

#### New Profile Softproof Capabilities

See the effect of your custom profile and settings even before you make a test print. No more wasted paper and ink!

#### New Multiple Test Image options

Now you can switch easily from the standard test images or use your own personal images

#### New Curves Import Function

Total control over Color and Black & White Tinting curves in your Image Editor, which allows you to apply adjustments to the profile rather than to each individual image

#### PreciseLight™ Function

Adjust profile settings to reflect different types of display lighting

#### Supports 16 bit profiles

Supports both 8 bit and 16 bit profiles so you can faithfully reproduce the most subtle elements of your work

#### New Advanced Presets

Easily select prebuilt or custom sets of advanced profiles settings to produce profiles with specific combinations of highlight and shadow tint, and detail and neutrality settings.

#### New Gray Axis Algorithm

Extended Grays Target allows you to add precision gray and near gray data to profiles, enhancing quality of Tinted and Black and White prints

#### Printing Primer

Helps verify that your printer is configured and operating correctly

#### Easy to Use

Friendly Wizard walks you through the entire process with multiple help screens

*"PrintFIX PRO 2.0 is the most important innovation in print workflow to date. Through its powerful ICC profiling and intuitive tools, this software introduces a new efficiency and level of creative control, for accurate and consistent color for black and white printing."*

- Gregory Schern, President of Moab Paper Company
